Hypnosis and Group Support in Medical Care:
Altering Perception and Reality
Outline

- 1. **Stress, Altered Mental States, and Illness**
- 2. **Hypnosis:**
 - Effects on the Brain
 - Effects on the Body
- 3. **Cancer**
 - 1. Stress and Depression
 - 2. Diurnal cortisol and cancer progression
 - 3. Emotion regulation and diurnal cortisol
 - 4. Effects of Supportive/Expressive Group therapy on survival time
- 4. **Conclusions: Feeling and Healing**

Property of David Spiegel – Do Not Reproduce

Unconventional Medicine

- Popular: 42% of Americans use
 - more visits than to primary care (425M)
 - Pain, self care, weight loss, pediatrics
 - 50% of cancer patients
 - Sophisticated AIDS users
- Concealed - 72% don't talk about it to doctor
- Combined - 83% used conventional treatment

Reasons for Seeking Alternative Therapies

Kaiser Permanente Member Health Survey
10% of enrollees - 1993

Pain	56%
Stress or Mental Health	22%
Health Promotion	7%
URI'S	5%
Allergies	2%
GI Problems	2%
Hypertension	1%

Property of David Spiegel – Do Not Reproduce

Why Patients Use Integrative Medicine

- Value whole person emphasis
 - Stress and distress management
- Active participation in treatment
- Orthodox medicine
 - Didn't work
 - Adverse effects
 - Poor doctor-patient communication
- Pain and other chronic symptoms

Vincent, C. 1996 "Why do patients turn to complementary medicine? An empirical study. *British Journal of Clinical Psychology* 35:37-48

Sample Characteristics

- Sample: 23 children undergoing a VCUG
Age: Mean = 7.5 years (SD = 2.5; range = 4-14)
Gender: 74% female; 26% male
Ethnicity: 1 (4%) African-American
3 (13%) Asian-American
17 (74%) Caucasian
1 (4%) Hispanic/Latina
1 (4%) Other
Previous VCUGs: Mean = 2.7 (SD = 1.6; range = 1-6)
Condition: 12 hypnosis; 11 recreational therapy

Property of David Spiegel – Do Not Reproduce

VCUG Procedure

- Child disrobes and lies on examination table
- Initial x-rays are taken
- Genital area is cleaned
- Catheterization is conducted
- Bladder is filled with contrast fluid
- X-rays are taken
- Child voids on table as more x-rays are taken.

**Supportive/Expressive Group
Psychotherapy: Themes**

- 1. Building Bonds
- 2. Expressing Emotion
- 3. Detoxifying Dying
- 4. Reordering Life Priorities
- 5. Fortifying Families
- 6. Clarifying Communication with Doctors
- 7. Symptom Management

Property of David Spiegel – Do Not Reproduce

Supportive/Expressive Group Therapy

Expressing Emotion

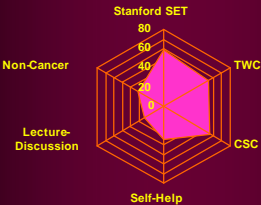

- Facing feelings directly
- Restructuring feelings in a supportive social context
- Emotion as a source of closeness rather than isolation

Property of David Spiegel – Do Not Reproduce

Property of David Spiegel – Do Not Reproduce

**Expressing
True Feelings**

Property of David Spiegel – Do Not Reproduce

Supportive/Expressive Group Therapy

Detoxifying Dying

Restructure one overwhelming fear
into a series of problems

- Process of dying
- Separation from loved ones
- Loss of control
- Pain

Develop active coping strategies

Property of David Spiegel – Do Not Reproduce

Property of David Spiegel – Do Not Reproduce

Property of David Spiegel – Do Not Reproduce

"What I found is at the beginning in the group is a bit like that fear you have standing at the top of a tall building or at the edge of the Grand Canyon. At first you are afraid to even look down (I don't like heights), but gradually you learn to do it and you can see that falling down would be a disaster. Nonetheless you feel better about yourself because you're able to look. That is how I feel about death in the group – I am able to look at it now. I can't say I feel serene, but I can look at it."

Emily

Overall Survival in Current Study vs.
Original Treatment and Control Groups

Property of David Spiegel – Do Not Reproduce

Randomized Trials Showing
Survival Benefit

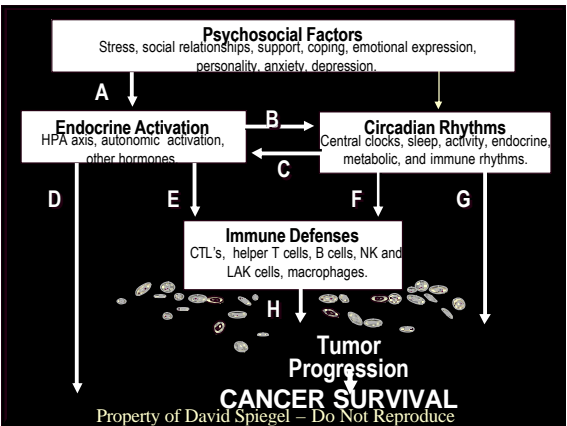

Study	Cancer	N	Psychological Outcome
Spiegel et al 1989	Metastatic Breast	86	Less distress, pain
Richardson et al, 1990	Lymphoma, leukemia	94	Better treatment adherence
Fawzy et al, 1993	Melanoma	66	Less distress, Better coping
Kuchler et al, 1999	GI cancers	271	Better stress management
McCorkle et al 2000	Solid Tumors	375	Less distress

Property of David Spiegel – Do Not Reproduce

Randomized Trials Showing
No Survival Benefit

Study	Cancer	N	Psychological Outcome
Linn et al. 1982	Lung, GI	120	Less depression, more self esteem, life satisfaction
Ilnyckyj et al, 1994	Breast	127	No benefit
Cunningham et al, 1998	Metastatic Breast	66	No benefit
Edelman et al, 1999	Metastatic Breast	121	No long-term benefit
Goodwin et al, 2001	Metastatic Breast	235	Less distress, depression

Property of David Spiegel – Do Not Reproduce

Conclusions

- 1. Mind Matters:
 - Stress and Hypnosis are altered mental states that can affect brain and body function for good or ill
- 2. Hypnosis alters brain processing of pain and anxiety, leading to better medical outcome
- 3. Cancer:
 - Depression and Cancer are a bad combination
 - Diurnal cortisol dysregulation predicts cancer progression
 - Supportive/Expressive Group therapy improves emotion regulation, reduces distress, and may affect survival time
- 4. Feeling may lead to healing
